

Jared Vue and Viet Ha

CSCI 130

12-6-2024

Minesweeper Project

How to run:

1. First download the minesweeper.sql
2. Then create a new data base and insert the sql code into the SQL tab in XAMPP
3. Then take the zip file and import it into XAMPP
4. Finally you should be able to look and run through all of our pages

Work Distribution:

Viet did most of the server and game creation while Jared did most of the organization/CSS and some front end. Every other week we tried to work on the project as best we could. We first made the actual game then moved on to connecting it and applying CSS.
